### Applications

You have been asked to create a website for a small company called “Russo’s Pizzeria”. You are going to create a three-page website for the company; first page just giving information about the company, the second page organized as a menu, and the third page to order the pizza. In this application, you will be working on the first page of the website - an informative page.

During this exercise, you are only allowed to use **Notepad**. The use of any other type of text editor such as Notepad++ or for web development tools such as Dreamweaver or Expression Web will result in immediate disqualification from this event.

A screen capture of the expected end result is included for your inspection and to be used as a guide for completing this exercise.

When complete, print all code generated for this exercise (HTML and Style Sheet). Also print a screen capture of your finished work as it appears in the web browser so that it may be used for grading purposes.

Submit all printed pages, along with your copy of this test, and your answer form to your proctor.

Your task is to regenerate the web page shown in the screen capture provided in this packet, using HTML 5, CSS, and the parameters specified below.
